

PRIMER CONCENTRATE ITAL SHIELD

IDEAL TO DEGREASE WALLS AND ENSURE THE MAXIMUM ADHERENCE OF OUR SHIELDING PAINTS

HIGH-QUALITY PRIMER CONCENTRATE FOR SURFACE PREPARATION WITH CARBON PAINTS

This primer concentrate is specially formulated to complement our carbon paints.

It's ideal for priming over solid older paint layers, and on brittle, chalky, or absorbent surfaces.

Features include substrate consolidation, improved adhesion, effective penetration, and absorbency regulation.

Additionally, it's recommended for our graphite shielding paints (HSFxx) when challenging (mineral-based) coatings are to be applied.

PROCESSING:

- **Dilution:** Combine 1 liter of the concentrate with 4 liters of water to produce 5 liters of ready-to-use primer.
- **Shelf Life:** If tap water is used for dilution, ensure usage within 48 hours.
- **Application:** Employ a top-tier paint roller for application. Avoid operating under conditions colder than 5°C/41°F.
- **Consumption:** The amount used varies based on substrate type and its absorbency. Typically, interior coverage is around 37.5 m², while exterior coverage is approximately 25 m².

INGREDIENTS:

The formulation consists of a pure-acrylic binder, specific additives, and preservatives (BIT, INN, MIT).

Content: 1 liter

Weight: 1300 g

Packaging: 100x100x230 mm

TARIFF: 32091000

Ready for 5G

These products are designed to shield against all 5G frequencies. In the shielding diagrams, you will find two gray bars representing the 5G frequency spectrums: FR1 (600 MHz – 6 GHz) and FR2 (24 GHz – 40 GHz).
